THE PROBLEM

Legacy Systems Are Becoming a Growing Risk to Insurers

Legacy data is messy

Decades of inconsistent, complex data make standardization and migration tough.

Insurers run two systems

Maintaining both legacy and modern platforms increases cost and operational risk.

Expertise is fading

As system veterans retire, maintaining legacy tech becomes harder.

Transformation is stalled

Legacy systems delay digital progress and threatens compliance and growth.

Scattered legacy data

30+ years of fragmented, inconsistent policy and claims data.

High risk, low visibility

Inconsistent data formats and rules made migrating to a modern platform extremely risky.

AI-driven migration

InsOps automated mapping, cleansing, and migration with 99%+ accuracy.

Live in 4 months

Golden Bear launched on Guidewire with near-zero disruption and clean data.
